TriTech Software Systems and Medicount Management Team up to provide total integration of ePCR and Billing Software

Overview

TriTech Software Systems, developer of Sweet Billing and Fusion ePCR software, has partnered with many EMS billing services across the county to promote the integration of Fusion ePCR and Sweet Billing. Medicount Management, Inc. in Cincinnati, Ohio, is pleased to announce the formal availability of Fusion ePCR to their billing service clients.

“Considering our 15 year relationship with TriTech and the bidirectional interface with our billing system, I think Fusion ePCR is a perfect fit to improve efficiencies and collections for our clients,” said Tim Newcomb, Vice President of Medicount Management, Inc. The state-of-the-art integration between the Fusion ePCR and billing application will allow Medicount Management to host the Fusion ePCR software on their server, enabling their clients to upload ePCR data to Medicount via the internet. This will allow the PCR data to be sent electronically to Medicount, via a secure internet connection, to a secure database setup specifically for each individual client. This will also allow the billing service client to receive current code and patient updates with a bi-directional interface. TriTech is the only vendor that can offer the bi-directional interface between billing and ePCR software. This integration will ensure the highest level of communication between the field and the billing office.

Medicount will also be able to receive electronic copies of patient care reports and signature forms, again ensuring accurate and timely data exchange between Medicount and their billing service clients. When EMS billing services receive data electronically, data-entry errors are reduced, and turn-around time for billing and reimbursement is shortened significantly. From a legal aspect, all data is documented, providing the client legal accountability for their services.

Considering our 15 year relationship with TriTech and the bidirectional interface with our billing system, I think Fusion ePCR is a perfect fit to improve efficiencies and collections for our clients.

Tim Newcomb, Vice President
Medicount Management, Inc.

Medicount will also offer optional state reporting along with Fusion ePCR to their clients. The state reporting is completed from the database of calls and patients that are acquired over time. This data is an excellent source to use for in-house QA reporting and to satisfy state reporting requirements.

For pricing and more details, please contact Tim Newcomb at Medicount Management, Inc.
