

Sweet-Field Data Reports

Call Report

(detail & summary options): Lists calls with flexible detail and summary options. Filtering capability provides precise reporting capabilities.

Call Demand Analysis Report

(summary options): Provides useful information for analyzing details, such as "busiest hours of the day," to help determine staffing needs and equipment demands.

Call Frequency Analysis Report

(summary options): Creates a summary of the number of calls occurring during specific time slots to identify peak demand.

Code Analysis Report

(summary options): Enables financial and operational comparisons between two different date ranges. Examples: how many transports to XYZ Hospital were made last year vs. this year, how many calls citing chest pain as the reason were made last month vs. the month before, etc.

Crew Analysis Report

(detail & summary options): Enables analysis of crew member information such as procedures performed (and whether or not they were successful), the number of calls crew members went on and hours logged, the average amount of time a crew member spent on a call, etc. This report can be very helpful in determining crew efficiency and future staffing needs.

Fractile Time Analysis Report

(summary options): Identifies how often the service is complying with required or minimum acceptable response times. Calls exceeding the acceptable minimum response times are printed as exceptions for review. Useful for identifying response time problems, isolating zones that may need greater coverage, or demonstrating how successfully a service meets their response time criteria.

Log Report

(detail options) Includes a condensed, yet highly detailed account of each call selected. Many services run a Log Report at the end of each day to look at the detail of their calls.

Patient Report

(detail options): A very flexible report that produces patient information, such as "all patients aged 65 and over," "patients using a particular payor/insurance," "patients living in a specific city," and so forth.

Print Codes Report

Enables a printable, easy-to-read list of some or all of the codes in your system. You may choose to print a short listing (ID and Description) or a detailed listing (much of the information in the code).

Protocol Exception Report

(detail & summary options): Shows procedures not performed based on the procedures associated with the reason codes (provider impressions). The report also is a very valuable tool for internal review of procedures followed on calls.

Response Time Analysis Report

(summary options): Summarizes the amount of time that elapsed between the different "times entered on the call" (such as 'Call Received,' 'In Service,' 'On Scene,' 'Leave Scene,' 'At Destination,' etc.). These "Time Names" are specified in the Database System Setup.

Unit Analysis Report

Enables analysis of unit information such as the number of calls units went on, the miles traveled and hours involved in each group, the average amount of time a unit was out on a call, etc. This report may be very helpful in determining unit efficiency and future equipment needs.

Report Generator

Allows the creation of unique, user-defined reports that provide customized information necessary to help your business run smoothly.
